

The Benefits Of, And Considerations For Outsourcing IT

Outsourcing — the practice of using outside firms to handle work normally performed within a company — is a familiar concept to many entrepreneurs. Small companies routinely outsource their payroll processing, accounting, distribution, and many other important functions — often because they have no other choice. Many large companies turn to outsourcing to cut costs. In response, entire industries have evolved to serve companies' outsourcing needs.

But not many businesses thoroughly understand the benefits of outsourcing. It's true that outsourcing can save money, but that's not the only (or even the most important) reason to do it. As many firms discovered during the outsourcing "mania" of the early 1990s, outsourcing too much can be an even bigger mistake than not outsourcing any work at all. The down turning economy has and will cause many companies into huge layoffs and they have subsequently outsourced functions that were better kept in-house. Wise outsourcing, however, can provide a number of long-term benefits:

Control capital costs. Cost-cutting may not be the only reason to outsource, but it's certainly a major factor. Outsourcing converts fixed costs into variable costs, releases capital for investment elsewhere in your business, and allows you to avoid large expenditures in the early stages of your business. Outsourcing can also make your firm more attractive to investors, since you're able to pump more capital directly into revenue-producing activities.

Increase efficiency. Companies that do everything themselves have much higher research, development, marketing, and distribution expenses, all of which must be passed on to customers. An outside provider's cost structure and economy of scale can give your firm an important competitive advantage.

Reduce labor costs. Hiring and training staff for short-term or peripheral projects can be very expensive, and temporary employees don't always live up to your expectations. Outsourcing lets you focus your human resources where you need them most.

Start new projects quickly. A good outsourcing firm has the resources to start a project right away. Handling the same project in-house might involve taking weeks or months to hire the right people, train them, and provide the support they need. And if a project requires major capital investments (such as building a series of distribution centers), the startup process can be even more difficult.

Focus on your core business. Every business has limited resources, and every manager has limited time and attention. Outsourcing can help your business to shift its focus from peripheral activities toward work that serves the customer, and it can help managers set their priorities more clearly.

Level the playing field. Most small firms simply can't afford to match the in-house support services that larger companies maintain. Outsourcing can help small firms act "big" by giving them access to the same economies of scale, efficiency, and expertise that large companies enjoy.

Reduce risk. Every business investment carries a certain amount of risk. Markets, competition, government regulations, financial conditions, and technologies all change very quickly. Outsourcing providers assume and manage this risk for you, and they generally are much better at deciding how to avoid risk in their areas of expertise.

Conclusion

There are many things to consider when making the decision to outsource any function of your organization. When making the decision to give up control of your tactical IT functions you should start by pulling out your company's mission statement. Ask yourself this question, "where within my mission does it state that my company's product offering or core function is providing IT Services?" If it is not in your mission statement it would be safe to assume it is not a core function of your organization. If that is the case you should definitely outsource those noncore services and focus on what you

ABOUT TBG SECURITY

TBG Security provides Information Security Services the Fortune 1000, as well as other leading retail, education, healthcare and telecommunications companies. TBG Security is engaged by leading companies around the world, including: Partners Healthcare, Bahamas Telecommunications Company, US Fiduciary Service and more. TBG Security Compliance Services provides a complete spectrum of compliance management consulting and integration services, including payment service integration, risk management compliance administration, automation and payment security compliance.
